

OHF Rowan's Law Concussion Awareness

Ontario Hockey Federation Rowan's Law Acknowledgement Form

The Ontario Government has enacted *Rowan's Law (Concussion Safety), 2018*, S.O. 2018, c. 1 ("Act"). Ontario Regulation 161/19, the Act requires all sport organizations as defined in the Regulation ("Sports Organization"), which includes the Ontario Hockey Federation ("OHF"), to have a Concussion Code of Conduct. This Concussion Code of Conduct must require participants, as set out in the Act, to review the Ontario Government's issued Concussion Awareness Resources on an annual basis. A participant is subject to a Concussion Code of Conduct for each Sports Organization a participant registers with.

Concussion Awareness Resources are located at www.ontario.ca/concussions. The OHF Concussion Code of Conduct and the Concussion Awareness Resources must be reviewed before you can register/participate in the OHF.

In accordance with Rowan's Law, Stakeholders of the Ontario Hockey Federation (OHF) are required to confirm that they have reviewed the OHF Concussion Code of Conduct and Ontario Government Concussion Awareness Resources before that participant can register/participate in a sport.

Important Legal Notice

The following module contains the ROWAN's Law segment of the Recertification session. INDIVIDUALS 17 YEARS OF AGE AND UNDER are required to have a parent/guardian present while this specific module is presented.

MOVING FORWARD WILL CERTIFY THAT YOU ARE EITHER OVER THE AGE OF 17, OR HAVE A PARENT/GUARDIAN PRESENT.

OHF Concussion Code of Conduct Policy

1. I will help prevent concussions by my commitment to:
 1. Wearing the proper equipment for my sport and wearing it correctly;
 2. Respecting the rules of my sport or activity; and
 3. My commitment to fair play and respect for all* (respecting other athletes, coaches, team trainers and officials).
2. **I will care for my and others health and safety by taking concussions seriously, and I understand that:**
 1. A concussion is a brain injury that can have both short- and long-term effects;
 2. A blow to the head, face or neck, or a blow to the body that causes the brain to move around inside the skull may cause a concussion; and
 3. A person doesn't need to lose consciousness to have had a concussion.
3. **I will commit to:**
 1. report any possible concussion received during participation in the OHF to a designated person;
 2. recognizing a concussion or possible concussion and the reporting to a designated person when an individual suspects that another individual may have sustained a concussion;
 3. sharing any pertinent information regarding incidents of a removal from sport with the Player's school and other sport organization with which the player has registered;
 4. sharing any pertinent information regarding incidents of a concussion that have occurred outside of participation in the OHF to a designated person with your/individual's Team;
 5. Complete Injury Report Forms in a timely manner and ensure they are submitted to the Member;
 6. Give commitment to providing opportunities before and after each training, practice and competition to enable participants to discuss potential issues related to concussions; and

7. Maintain an open dialogue with all athletes and participants (and parents/guardians in cases of minors) about their health and any signs and symptoms of concussion they may experience.
4. **I will commit to respect the OHF Removal and Return to Play Protocol by:**
 1. Understanding that if I have a suspected concussion, I will be removed from sport and that I will not be able to return to training, practice or competition until I undergo a medical assessment by a medical doctor or nurse practitioner and have been medically cleared to return to training, practice or competition;
 2. Understanding I will have to be medically cleared by a medical doctor or nurse practitioner before returning to training, practice or competition;
 3. Respect the roles and responsibilities of all coaches and health care professionals in Return to Play protocol; and
 4. Respond appropriately with Return to Play protocols if a participant is experiencing concussion related symptoms or if you suspect any participant has sustained a concussion.

Concussion Awareness Resources

At the completion of the recertification session, you will be sent additional information and resources to further increase your knowledge and awareness of this very serious issue

CONCUSSION AWARENESS RESOURCE

Preventing injuries is important to keeping people active throughout their lives. Some injuries are easy to see and treat but what about an injury inside the head? Brain injuries, such as concussions, don't show on the outside and are not always obvious. Even when you can't see the injury, a person with a concussion still feels the effects and needs the proper care to get better.

This resource will help you learn more about concussions so you can keep yourself and others active and safe – whether you're an athlete, student, parent, coach, official or educator.

WHAT IS A CONCUSSION?

A concussion is a brain injury. It can't be seen on X-rays, CT scans or MRIs. It may affect the way a person thinks, feels and acts. Any blow to the head, face or neck may cause a concussion. A concussion may also be caused by a blow to the body if the force of the blow causes the brain to move around inside the skull. Examples include being hit in the head with a ball or falling hard onto the floor.

A concussion is a serious injury. While the effects are typically short-term, a concussion can lead to a long-lasting symptoms and even long-term effects, such as memory problems or depression.

PREVENTING A CONCUSSION

First, educate yourself about concussions.

You should also:

- Ensure you/your athletes use equipment that is in good condition;
- Ensure you/athletes you are supervising wear sports equipment that fits properly;
- Ensure you/your athletes respect the rules of the sport;
- Commit to your sport organization/school's Concussion Code of Conduct and make sure your athletes do too; and
- Promote a safe and comfortable environment for everyone to report injuries. Make sure everyone understands the risks of not speaking up.

RECOGNIZING A CONCUSSION

HIT. STOP. SIT.

Everyone can help recognize a possible concussion if they know what to look and listen for.

A person with a concussion might have one or more of the signs or symptoms listed below. They might show up right away or hours, even days, later. Just one sign or symptom is enough to suspect a concussion. Most people with a concussion do not lose consciousness.

Common signs and symptoms of a concussion:

- **PHYSICAL:**
- Headache
- Pressure in the head
- Dizziness
- Nausea or vomiting
- Blurred vision
- Sensitivity to light or sound
- Ringing in the ears
- Balance problems
- Tired or low energy
- Drowsiness
- “Don’t feel right”

- **EMOTIONAL:**

- Irritability (easily upset or angered)
- Depression
- Sadness
- Nervous or anxious

- **COGNITIVE (THINKING):**

- Not thinking clearly
- Slower thinking
- Feeling confused
- Problems concentrating
- Problems remembering

- **SLEEP-RELATED:**

- Sleeping more or less than usual
- Having a hard time falling asleep

RED FLAGS:

**“Red flags” may mean you have a more serious injury.
Treat red flags as an emergency and call 911.**

- Neck pain or tenderness
- Double vision
- Weakness or tingling in arms or legs
- Severe or increasing headache
- Seizure or convulsion
- Loss of consciousness (knocked out)
- Vomiting more than once
- Increasingly restless, agitated or aggressive
- Getting more and more confused

WHAT TO DO NEXT?

If you suspect a concussion, remove yourself or the person you are supervising from the activity right away. Continuing to participate puts you or the person with a suspected concussion at risk of more severe, longer-lasting symptoms. Call the parent/guardian (for athletes under 18 years of age) or emergency contact. Don't leave anyone with a suspected concussion alone.

Anyone who has been removed from sport with a suspected concussion should see a physician or nurse practitioner as soon as possible. That person should not return to unrestricted participation in training, practice or competition until they have received medical clearance.

GETTING BETTER

Most people with a concussion get better in one to four weeks. Some people take longer. Each concussion is unique – don't compare one person's recovery to another's.

It's possible for a concussion to have long-term effects. People may experience symptoms, such as headaches, neck pain or vision problems, that last for months, or even years. Some may have lasting changes in their brain that lead to issues such as memory loss, concentration problems or depression. In rare cases, a person who suffers multiple brain injuries without healing in between may develop dangerous swelling in their brain, a condition known as second impact syndrome, that can result in severe disability or death.

While a person is recovering from a concussion, they shouldn't do activities that may make their symptoms worse. This may mean limiting activities such as exercising, screen time or schoolwork.

Healing from a concussion is a process that takes patience. Rushing back to activities can make symptoms worse and recovery longer.

Anyone who has a concussion should let others know. This includes parents, all sport teams/clubs, schools, coaches and educators.

And remember, returning to school comes before returning to unrestricted sport.

RETURNING TO SCHOOL AND SPORT

Athletes and students who are diagnosed by a physician or nurse practitioner as having a concussion must proceed through their sport organization's return-to-sport protocol and/or, where applicable, their school board's return-to-school plan.

Athletes and students should work with their healthcare professional and sport organization/school to establish their individual plans to return to sport as well as return to school.

The Return-to-School Plan (Learning and Physical Activity)

Students in elementary and secondary school will need to follow their school board's return-to-school plan, which supports a student's gradual return to learning and return to physical activity. Contact the school for more information.

The Return-to-Sport Protocol

Most return-to-sport protocols suggest that athletes should rest for 24 to 48 hours before starting any gradual return to sport. An athlete must not resume unrestricted participation in training, practice or competition until they have received medical clearance.

Medical clearance is always required prior to the athlete's return to unrestricted practice, training or competition.

Check with your sport club and school for the specific steps that you should know.

RETURNING TO SCHOOL AND SPORT

An athlete is typically ready to progress to the next step when they can do the activities at their current step without new or worsening symptoms. If at any step symptoms get worse, they should stop and go back to the previous step. Each step should take at least 24 hours to complete. If symptoms do not improve or if the symptoms continue to worsen, the athlete should return to the physician or nurse practitioner.

REMINDER

Remember:

- 1. Recognize signs and symptoms of a concussion and remove** yourself or the athlete from the sport/physical activity, even if you feel OK or they insist they are OK.
- 2. Get yourself/the athlete checked out** by a physician or nurse practitioner.
- 3. Support gradual return** to school and support.
